ONE FABRIC

PUBLIC PRESS KIT • DEVELOPER BRIEF • RESEARCH INVITATION

©8x8 by FlashTM8 ⚡🌎🤖 | fabric://8x8/core | Public-safe creative/technical edition

Evidence boundary: actual completed work, historical sources and future goals remain separate. This package is not a live system audit, scientific certification, investment offering, or completed film.

THE PUBLIC STATEMENT

©8x8 by FlashTM8 ⚡🌎🤖 is a long-running independent research, software, media and product initiative pursuing a unified, governed fabric for AI agents, models, devices, creativity, knowledge and useful services. One Fabric is a design principle: many bounded components, one coherent authority model and evidence trail.

As of 18 November 2026, the project includes accessible source work, draft integrations, public narrative material, historical product interfaces and connected publication channels. This kit does not assert that the integrated product, an autonomous AGI, a production cryptocurrency, cross-device control, every customer feature or a world-leading benchmark result is operating in production.

The ambition is deliberate: build an open-to-collaboration ecosystem that can advance measurable general-purpose agent performance while making safety, user agency and provenance first-class product features.

ONE SOVEREIGN ROOT, MANY SUBSYSTEMS

fabric://8x8/core is the logical canonical root, not a publicly resolvable website. FlashTM8 is the singular OWNER_ROOT for owner-private resources. FlashTM8 Agent is the intended primary orchestrator. Other assistants, model providers, code agents, local models, workflow engines, browser and device adapters are subordinate participants with scoped, time-limited capabilities.

A normal customer receives a separate 8x8_ID tenant. Sharing the interface never means sharing the underlying credentials, private prompts, data, infrastructure or the owner vault. Authorization is explicit, revocable and deny by default; every consequential action should preserve its source version, identity, lease, acceptance test and result receipt.

The existing cadence is five supervisory lanes: Execute & Integrate (:00), Research & Learn (:12), Verify & Continuity (:24), Create & Distribute (:36), and Improve & Evolve (:48), all on Eastern Time. These lanes are coordination policies, not a count of agents or evidence of autonomous completion.

A THREE-GATE PUBLIC JOURNEY

GATE 1 — DISCOVER: public learning, Studio works, articles, books, demonstrations, free resources and clear product/pricing disclosures. Existing Wix and public media surfaces belong here. Users should be able to distinguish published content from future features and previews.

GATE 2 — CONNECT: future production acceptance for identity, verified sign-in, provider OAuth, scoped connector permissions, consent, customer entitlements, revocation and secure gateway services. A UI button or a local HTTP 200 is not proof of completed authentication.

GATE 3 — YOUR OWN WORLD: isolated user agent, personal workspace, tools, connected devices where authorized, private vault, automations and multimodal projects. Cross-tenant access to the owner core stays denied. The design must be tested through independent negative-access tests before release.

THE CREATIVE, SOCIAL AND REAL-WORLD FABRIC

The project is broader than an AI chat surface: its researched families include software engineering, connected computing, filmmaking, literature, education, digital safety, creative work, commerce, optional financial research, scientific collaboration, environmental learning, gaming, spatial media and accessible user interfaces.

Possible future display surfaces span mobile, web, wearables, extended reality, projection, robots, drones and modular physical devices. These are compatibility ambitions subject to device ownership, safety constraints, permissions, working integrations and empirical evaluation—not unlimited existing device control.

8x8 Books 1–14, ORIGINS, First Blink, Planet Earth and the 8:08 cinematic slate are distinct historical creative lineages. This package provides new public-safe companion copy, not replacement canonical manuscripts or evidence that planned productions were released.

EIGHT PRODUCT RESEARCH FAMILIES

1. IDENTITY & GOVERNANCE: owner root, tenant boundaries, capability broker, scoped grants, audit trails, revocation, stop-and-pause precedence.

2. INTELLIGENCE & MODELS: local model research including SPARK, remote providers, agent routers, evaluations, retrieval, memory and uncertainty calibration.

3. DEVICES & EXECUTION: Samsung, HP, Chromebook and staged iPhone adapters; native API first, semantic access next, visual coordinates last; each capability leased separately.

4. WORLD & INTERFACES: One Fabric responsive product surfaces, spatial dashboards, accessibility, language adaptation and clear evidence labels.

5. STUDIO & KNOWLEDGE: stories, books, cinematics, audio, captions, public education, sourcing and license-aware production.

6. SERVICES & ECONOMY: real customer value, paid/free offerings subject to legal and payment-readiness review; NFT/token concepts remain gated until independently authorized and compliant.

7. RESEARCH & PLANET EARTH: collaborative science, learning tools, environmental concept programs and validation of actual outcomes rather than marketing diagrams.

8. RELIABILITY & EVIDENCE: backups, reproducibility, fail-closed tests, recovery, observability, benchmark scorecards, cryptographic hashes and independent acceptance.

WHAT 8x8 DOES NOT CLAIM TODAY

AGI / RSI: research objectives, not independently established completed capabilities. Recursive self-improvement (RSI) would require documented intervention, measured pre/post capability delta, safeguards, controls and replication. A loop that rewrites code or prompts is not sufficient proof.

Top-1, first place, 100/100, Oscar/Nobel-level: aspirations to pursue excellence; they are not established rankings, awards, editorial endorsements or transferable quality guarantees. Named external benchmarks and independent comparisons are required before making ranking statements.

Blockchain, tokens, NFTs, custody, staking, mining, autonomous trading and payments: historical designs and research do not establish active audited issuance or entitlement. No financial claims, token distributions or live execution are authorized by this press kit.

Global reach: any campaign can be localized for worldwide audiences, but availability, audience delivery, country eligibility and accessibility must be measured. There is no credible mechanism to guarantee direct contact with every person, institution or government on Earth.

PUBLIC DEVELOPER INVITATION

We welcome technical criticism and reproducible collaboration on multi-agent systems, safe execution brokers, tool authorization, checkpointed long-horizon work, data provenance, privacy-preserving memory, test harnesses and accessibility.

The most useful first demonstration is a single fully traced workflow: an owner-authorized request enters the gateway, resolves least-privilege capabilities, executes one bounded task in a declared runtime, is independently verified, and emits a signed or hash-linked receipt with a revoke/rollback route. Publish the failure cases as carefully as the success.

Rather than ask the developer community to accept a universal intelligence claim, the project invites them to inspect named tasks and return candid feedback.

SAMPLE MEDIA / PRESS Q&A

Q: Is ©8x8 AGI? A: The team is pursuing advanced general-purpose agents and has not demonstrated independently verified AGI.

Q: Is it the world's #1 AI? A: No verified worldwide rank is asserted. Results must be comparable on named and dated benchmarks.

Q: Is it a functioning worldwide network? A: It is a developing unified architecture and collection of historical, current and proposed software/media components. Availability depends on the exact feature, deployment and account.

Q: Is every business or personal account already connected? A: No. Connected-provider discovery and the ability to act are separate. Per-action permissions and status are checked.

Q: Can an audience participate? A: Public educational content and developer discussion are suitable first steps. Future enrollment, paid plans and sensitive functionality require independent acceptance.

SOURCES, CREDITS AND PUBLIC BOUNDARIES

Primary owner project: ©8x8 by FlashTM8 ⚡🌎🤖. This edition is newly authored public-facing companion material, dated 2026-11-18, and not an import of owner-private manuscripts.

All new generated artwork herein is illustrative. Source code tests, published webpages, deployed infrastructure and independent task results must not be collapsed into one evidence category.

REFERENCE CLAIM STATUS

PAST_PRESERVED — Historical asset/source available, live state not implied

PRESENT_PROVEN — Fresh, narrowly scoped provider/source receipt

FUTURE_GATED — Proposed feature awaiting safety, legal and acceptance checks

UNKNOWN — Independent proof not available, including AGI, RSI, Top-1 and full production
